Task1

Based our sections

Create Endpoints For categories

1. create endpoint for "Create_Category" and add categories in database.
2. create endpoint for "GetAllCategories" to get all categories from database.
3. create endpoint for "Update_Category" to get categories from database and update them again.
4. create endpoint for "GetCategoryByBId" to get specific id from database.
5. create endpoint for "DleteCategoryByBId" to Delete specific id from database.

- Test these APi's Endpoints with postman.
- Deliver your file as .zip or .rar.
